

Quality Policy

The quality of the products manufactured by MEC represents a key factor for the competitiveness of MEC itself and, consequently, for the prosperity of those who operate in it. In particular, all collaborators are involved in quality orientation since everyone's performance affects the final result.

MEC purpose is to pursue the quality not only of its products, but also of the entire company process through the development of the annually shared objectives.

The Quality Policy therefore consists of the following strategic lines:

- **Market-oriented quality**
The quality of the products is oriented to market demands, customer satisfaction and ensuring competitiveness through careful analysis of internal and external risk factors, analysis of the context, expectations and evaluation of risks / opportunities.
- **Customer-oriented quality**
Meeting the Customer's requirements and needs is the primary objective of the entire staff.
- **Improvement-oriented quality**
In this regard, the MEC Department is compliant with the UNI EN ISO 9001 standard and the continuous improvement is a result from its application as a management tool for achieving the goals.
- **Error prevention**
MEC aims at the prevention of errors and defects for a continuous improvement of the products offered to all customers.
- **Compliance with mandatory laws**
To ensure the quality produced, MEC pursues total compliance with the regulations and binding laws.

The Quality policy is re-evaluated on the occasion of the Review of the Quality Management System by the General Management in order to adapt it to any changed regulatory, technological, organizational, economic and social conditions.
